

P300 2.5-Inch SATA NAND Flash SSD

MTFDDACxxxSAL1x1

Features

- Micron® SLC NAND Flash
 - RoHS-compliant package
 - SATA 6 Gb/s interface
 - ATA modes supported
 - PIO modes 3 and 4
 - Multiword DMA modes 0, 1, 2
 - Ultra DMA modes 0, 1, 2, 3, 4, 5, 6
 - Industry-standard, 512-byte sector size support
 - Hot-plug capable
 - Native command queuing support with 32 command slot support
 - ATA8-ACS2 command set support
 - Secure erase (data page) command set
 - Self-monitoring, analysis, and reporting technology (SMART) command set
 - Performance (empty/steady state)^{1, 2, 3, 4}
 - Sequential READ: up to 360/360 MB/s
 - Sequential WRITE: up to 275/255 MB/s
 - Random READ: up to 60,000/44,000 IOPs
 - Random WRITE: up to 45,200/16,000 IOPs
 - READ latency: 0.153/0.154ms (TYP)
 - WRITE latency: 0.118/0.424ms (TYP)
 - Reliability
 - MTBF: 2 million hours
 - 3-year warranty
 - Static and dynamic wear leveling
 - Field-upgradable firmware
 - Uncorrectable bit error rate (UBER): <1 sector per 10¹⁶ bits read
 - Low power consumption: <7W (AVG)
 - Endurance: Total bytes written (TBW) – 50GB (0.875PB); 100GB (1.75PB); 200GB (3.5PB)
 - Mechanical/electrical
 - Standard SATA connector
 - 5V power (±10%)
 - Dimensions: 100.45mm x 69.85mm x 9.5mm
 - Weight: 100g
 - Operating temperature: 0°C to 70°C
 - Humidity (operating): 5% to 95% RH
 - Shock and vibration
 - 1500G/0.5ms
 - 5–500Hz at 3.1G
 - Capacity⁵: 50GB, 100GB, 200GB
- Notes:
1. 128K transfers used for sequential READ/WRITE values.
 2. 4K transfers used for random READ/WRITE latency values.
 3. I/O performance numbers as measured using Iometer with a queue depth of 32 and write cache disabled.
 4. Performance values apply to all drive capacities.
 5. 1GB = 1 billion bytes; formatted capacity is less.

Part Numbering Information

The Micron® RealSSD™ P300 SSD is available in different configurations and densities. Visit www.micron.com for a list of valid part numbers.

Warranty: Micron makes no warranties, expressed or implied, including, but not limited to, any implied warranties of merchantability, fitness for a particular purpose, other warranties that might arise from course of dealing or custom of trade other than that Micron warrants only that the product complies with Micron's specification sheet for the product at the time of delivery, provided that deviations from specifications which do not materially affect performance of such product in the system and configuration in or for which it is initially installed or qualified by customer shall not be deemed to constitute failure to comply with such specifications. Any claim against Micron must be made within **three (3) years** from the date of shipment by Micron and Micron has no liability thereafter. Micron's liability is limited to repair or replacement of the defective product or credit or refund of the purchase price of the defective product, provided that Micron may elect refund in lieu of credit, replacement or repair.

General Description

The Micron® RealSSD™ P300 solid state drive (SSD) uses a single-chip controller with a SATA interface on the system side and n-channels of Micron NAND Flash internally. Packaged in an industry standard 2.5-inch drive enclosure, the SSD integrates easily in existing storage infrastructures.

The Micron® RealSSD™ P300 SSD is targeted at applications that require a high percentage of random READ/WRITE operations; high performance in terms of IOPs or latency, high endurance, high data retention; or applications that are deployed in harsh environments.

Figure 2: Functional Block Diagram

Architecture

The P300 SSD is a NAND Flash storage device. A SATA 6 Gb/s interface connects to the SSD externally and communicates with the controller. The controller manages data transfers to and from the NAND Flash array.

Table 1: P300 Configurations

Unformatted Disk Density	NAND Flash Process	NAND Flash Density	Package Count	Die per BGA Package
50GB	34nm	16Gb	16	2
100GB	34nm	16Gb	16	4
200GB	34nm	16Gb	16	8

Note: 1. Density is shown as user capacity (unformatted).

Logical Block Address Configuration

The drive is set to report the number of logical block addresses (LBA) that will ensure sufficient storage space for the specified density. Standard LBA settings, based on the IDEMA standard (LBA1-02), are shown below.

Table 2: Standard LBA Settings

Drive Size ¹	Total LBAs		Max LBA		User Available Bytes
	Decimal	Hexadecimal	Decimal	Hexadecimal	(Unformatted)
50GB	97,696,368	5D2BA70	97,696,367	5D2BA6F	50,020,549,632
100GB	195,371,568	BA52230	195,371,567	BA5222F	100,030,242,816
200GB	390,721,968	1749F1B0	390,721,967	1749F1AF	200,049,647,616

Note: 1. 1GB = 1,000,000,000 bytes.

Interface Connectors

The SATA signal segment interface cable has four conductors and three ground connections. As shown in Package Dimensions, the cable includes a 7-pin signal segment and a 9-pin power segment arranged in a single row with a 1.27mm (0.050in) pitch.

Table 4: SATA Signal Segment Pin Assignments

Signal Name	Type	Description
S1	GND	Ground

Reliability

Micron SSDs incorporate advanced technology for defect and error management. Micron uses various combinations of hardware-based error correction algorithms and firmware-based static and dynamic wear-leveling algorithms.

Over the life of the SSD, uncorrectable errors may occur. An uncorrectable error is defined as data that is reported as successfully programmed to the SSD but when it is read out of the SSD, the data differs from what was programmed.

Table 8: Uncorrectable Bit Error Rate

Uncorrectable Bit Error Rate	Operation
<1 sector per 10 ¹⁶ bits read	READ

Mean Time Between Failures

Mean time between failures (MTBFs) for the SSD can be predicted based on the component reliability data using the methods referenced in the Telcordia SR-332 reliability prediction procedures for electronic equipment.

Table 9: MTBFs

Density	MTBF (Operating Hours) ¹
50GB	2 million
100GB	2 million
200GB	2 million

Note: 1. The product achieves a mean time between failure (MTBF) of 2 million hours, based on population statistics not relevant to individual units.

Endurance

Endurance for the SSD can be predicted based on the usage conditions applied to the device, the internal NAND component cycles, the write amplification factor, and the wear-leveling efficiency of the drive. The table below shows the drive lifetime for each SSD density based on predefined usage conditions.

Table 10: Drive Lifetime

Density	Drive Lifetime (Total Bytes Written)
50GB	.875PB
100GB	1.75PB
200GB	3.5PB

Notes: 1. Total bytes written calculated with the drive 100% full.
2. Access patterns are 50% sequential and 50% random. Random accesses: 10% are 512B; 50% are 4K; 15% are 32K; 15% are 64K; and 10% are 128K. Sequential accesses: 100% are 128K.

Data Retention

Micron SSD data retention at beginning of life: 10 years at 25°C

Micron SSD data retention at end of life: 1 year at 25°C

Electrical Characteristics

Table 11: SATA Typical Power Consumption

Density	Idle/Standby/Sleep	Secure Erase	SEQ Write/Read (128K XFR)	RND Write/Read (4K XFR)	Unit

100B	125	1200	3000/2000	2200/1700	mW
200GB	125	1400	3500/2200	2500/1900	mW

Table 12: Maximum Ratings

Parameter/Condition	Symbol	Min	Max	Unit
Voltage input	V ₅	4.5	5.5	V
Operating temperature	T _A	0	70	°C
Non-operating temperature		-40	85	°C
Rate of temperature change		-	20	°C/hour
Relative humidity (noncondensing)		5	95	%

Stresses greater than those listed may cause permanent damage to the device. This is a stress rating only, and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Table 13: Shock and Vibration

Parameter/Condition	Specification
Operating shock	1500G/0.5ms
Operating vibration	5–500Hz at 3.1G

Compliance

Micron SSDs comply with the following:

- RoHS compliant
- Halogen free
- SATA-IO
- WHQL
- CE (Europe): EN55022, 2006 Class B and EN55024, 1998 + A1: 2001 + A2:2003
- FCC: CFR Title 47, Part 15, ICES-003, all Class B
- UL (US): approval to UL-60950-1, 2nd Edition, 2007-03-27, IEC 60950-1:2005, 2nd Edition
- BSMI (Taiwan): approval to CNS 13438
- C-TICK (Australia, New Zealand): approval to AS/NZS CISPR22
- KCC RRL (Korea): approval to KCC MU2-C30025, KCC MU2-C30018 Class B
- W.E.E.E.: Compliance with EU WEEE directive 2002/96/EC. Additional obligations may apply to customers who place these products in the markets where WEEE is enforced.
- TUV (Germany): approval to IEC60950/EN60950
- V_{CCI}

FCC Rules

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Revision History

Rev. J – 4/12

- Added notes to package dimension graphic.

Rev. I – 10/11

- Added FCC rules to Compliance.

Rev. H – 5/11

- Added DOWNLOAD MICROCODE command to Table 7: Supported ATA Command Set; changed hex format of command codes.

Rev. G – 5/11

- Changed overall length of the enclosure + connector from absolute maximums to reference dimensions in packaging figure.

Rev. F – 4/11

- Removed references to altitude from Features section.

Rev. E – 4/11

- Removed references to green from Compliance section.

Features

- Micron® 25nm MLC NAND Flash
- RoHS-compliant package
- SATA 6 Gb/s interface
- ATA modes supported
 - PIO mode 3, 4
 - Multiword DMA mode 0, 1, 2
 - Ultra DMA mode 0, 1, 2, 3, 4, 5
- Industry-standard, 512-byte sector size support
- Hot-plug capable
- Native command queuing support with 32-command slot support
- ATA-8 ACS2 command set compliant
- ATA security feature command set and password login support
- Secure erase (data page) command set: fast and secure erase
- Self-monitoring, analysis, and reporting technology (SMART) command set
- 50GB Performance (steady state) ^{1,2}
 - Sequential 64K Read: 350 MB/s
 - Sequential 64K Write: 100 MB/s
 - Random 4K Read: 50K IOPs
 - Random 4K Write: 7K IOPs
 - READ Latency: 0.5ms (TYP)
 - WRITE Latency: 3.5ms (TYP)
- 100GB, 200GB, 400GB Performance (steady state) ^{1,2}
 - Sequential 64K Read: 350 MB/s
 - Sequential 64K Write: 140 MB/s
 - Random 4K Read: 50K IOPs
 - Random 4K Write: 7.5K IOPs
- Reliability
 - MTBF: 1.2 million device hours³
 - Static and dynamic wear leveling
 - Field-upgradeable firmware
 - Uncorrectable bit error rate (UBER): <1 sector per 10¹⁵ bits read
 - Low power consumption
- Endurance: Total bytes written (TBW)
 - 50GB: 87.5TB
 - 100–400GB: 175TB
- Capacity⁴ (unformatted): 50GB, 100GB, 200GB, 400GB
- Mechanical – 7.0mm height
 - SATA connector: 5V ±5%
 - 2.5-inch drive: 100.5mm x 69.85mm x 7.0mm
- Field-updateable firmware
- Operating temperature
 - Commercial (0°C to +70°C)⁵

- Notes:
1. Typical I/O performance numbers as measured using Iometer with a queue depth of 32 and write cache disabled.
 2. 4K transfers used for READ/WRITE latency values.
 3. The product achieves a mean time between failure (MTBF) based on population statistics not relevant to individual units.
 4. 1GB = 1 billion bytes; formatted capacity is less.

Warranty: Micron makes no warranties, expressed or implied, including, but not limited to, any implied warranties of merchantability, fitness for a particular purpose, other warranties that might arise from course of dealing or custom of trade other than that Micron warrants only that the product complies with Micron's specification sheet for the product at the time of delivery, provided that deviations from specifications which do not materially affect performance of such product in the system and configuration in or for which it is initially installed or qualified by customer shall not be deemed to constitute failure to comply with such specifications. Any claim against Micron must be made within three (3) years from the date of shipment by Micron and Micron has no liability thereafter. Micron's liability is limited to repair or replacement of the defective product or credit or refund of the purchase price of the defective product, provided that Micron may elect refund in lieu of credit, replacement or repair.

General Description

Micron’s RealSSD P400e solid state drive (SSD) uses a single-chip controller with a SATA interface on the system side and n-channels of Micron NAND Flash internally. Packaged in an HDD replacement enclosure, the SSD integrates easily in existing storage infrastructures.

The P400e SSD device is targeted at applications that require enterprise performance in high random READ operations; high performance in terms of IOPs or latency; high endurance; high data retention; or applications that are deployed in cost-sensitive environments that do not have significant WRITE operation constraints.

Performance

Measured performance can vary for a number of reasons. The major factors affecting drive performance are the density of the drive and the interface of the host. Additionally, overall system performance can affect the measured drive performance. When comparing drives, it is recommended that all system variables are the same, and only the drive being tested varies.

Performance numbers will vary depending on the host system configuration.

Table 7: Drive Performance

Density	50GB	100–400GB	Unit
Sequential read (64k transfer)	350	350	MB/s
Sequential write (64k transfer)	100	140	MB/s
Random read (4k transfer)	50,000	50,000	IOPs
Random write (4k transfer)	7000	7500	IOPs
Read latency	0.5	0.5	ms
Write latency	3.5	3.5	ms

- Notes:
1. Typical I/O performance numbers as measured using IOMeter with a queue depth of 32 and write cache disabled.
 2. IOMeter measurements are performed in the steady state region.
 3. 4k transfers used for READ/WRITE latency values.
 4. System variations may affect measured results.

Reliability

Micron’s SSDs incorporate advanced technology for defect and error management. They use various combinations of hardware-based error correction algorithms and firmware-based static and dynamic wear-leveling algorithms.

Over the life of the SSD, uncorrectable errors may occur. An uncorrectable error is defined as data that is reported as successfully programmed to the SSD but when it is read out of the SSD, the data differs from what was programmed.

Table 8: Uncorrectable Bit Error Rate

Uncorrectable Bit Error Rate	Operation
<1 sector per 10 ¹⁵ bits	READ

Mean Time Between Failures

Mean time between failures (MTBFs) for the SSD can be predicted based on the component reliability data using the methods referenced in the Telcordia SR-332 reliability prediction procedures for electronic equipment.

Table 9: MTBFs

Density	MTBF (Operating Hours) ¹
50GB	1.2 million
100GB	1.2 million
200GB	1.2 million
400GB	1.2 million

Note: 1. The product achieves a mean time between failure (MTBF) of 1.2 million hours, based on population statistics not relevant to individual units.

Endurance

Endurance for the SSD can be predicted based on the usage conditions applied to the device, the internal NAND component cycles, the write amplification factor, and the wear-leveling efficiency of the drive. Total bytes written measured with 55°C case temperature within the total bytes written values listed in this document. The table below shows the drive lifetime for each SSD density based on predefined usage conditions.

Table 10: Drive Lifetime

Density	Drive Lifetime (Total Bytes Written)
50GB	87.5TB
100GB	175TB
200GB	175TB
400GB	175TB

Notes: 1. Total bytes written calculated with the drive 90% full.
2. Access patterns are 50% sequential and 50% random and consist of the following: 5% are 4k; 5% are 8k; 10% are 16k; 10% are 32k; 35% are 64K; and 35% are 128k.

Electrical Characteristics

Stresses greater than those listed may cause permanent damage to the device. This is a stress rating only, and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Table 11: SATA Power Consumption

Density	Idle Average	Random Write/Read Maximum (4k transfer)		Sequential Write/Read Maximum (128k transfer)		Unit
50GB	59	2708	2245	2744	2690	mW
100GB	132	4272	2790	4112	3355	mW
200GB	157	4959	3078	4926	2887	mW
400GB	162	6793	3532	6831	3912	mW

- Notes: 1. Data taken at 25°C using a 6 Gb/s SATA interface.
2. Sequential power measured in IOMETER MAX with 128KB transfer size.

Table 12: Maximum Ratings

Parameter/Condition	Symbol	Min	Max	Unit
Voltage input	V ₅	4.5	5.5	V
Operating temperature	T _A	0	70	°C
Non-operating temperature		-40	85	°C
Rate of temperature change		-	20	°C/hour
Relative humidity (non-condensing)		5	95	%

Table 13: Shock and Vibration

Parameter/Condition	Specification
Operating shock	1500 G/1.0ms
Operating vibration	2–500Hz at 3.1G

Compliance

Micron SSDs comply with the following:

- RoHS
- CE (Europe): EN55022, 2006 Class B and EN55024, 1998 + A1: 2001 + A2:2003
- FCC: CFR Title 47, Part 15, ICES-003, all Class B
- UL (US): approval to UL-60950-1, 2nd Edition, 2007-03-27, IEC 60950-1:2005, 2nd Edition
- BSMI (Taiwan): approval to CNS 13438
- C-TICK (Australia, New Zealand): approval to AS/NZS CISPR22
- KCC RRL (Korea): approval to KCC MU2-C30025, KCC MU2-C30018 Class B
- W.E.E.E.: Compliance with EU WEEE directive 2002/96/EC. Additional obligations may apply to customers who place these products in the markets where WEEE is enforced
- TUV (Germany): approval to IEC60950/EN60950
- V_{CCI}
- IC (Canada):
 - This Class B digital apparatus complies with Canadian ICES-003.
 - Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada

FCC Rules

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Package Dimensions

Figure 4: 2.5-Inch Package – 7mm

- Notes:
1. Maximum mounting screw length: Bottom = M3 x 0.5 x 3; Side = M3 x 0.5 x 4
 2. Maximum torque: 4.5 in-lb
